According to the USDA & USGS, 9.5 percent, or 190 million acres, of the continental United States fell into the WUI in 2010, and that the number of houses within the WUI increased from 31 million to more than 43 million between 1990 and 2010. Today, that number is closer to 50 million homes. Home fire defense in wildland areas is critical.

Fires are on the rise!
More than 10 million acres of the U.S. were burned during the 2017 wildfire season with a cost of $2 billion, making it the most costly season ever, according to a study by the Proceedings of the National Academy of Sciences.

Homes at risk!
According to the USDA & USGS, 9.5 percent, or 190 million acres, of the continental United States fell into the WUI in 2010, and that the number of houses within the WUI increased from 31 million to more than 43 million between 1990 and 2010. Today, that number is closer to 50 million homes. Home fire defense in wildland areas is critical.

Ember Attack
There are many factors that contribute to the spreading of wildland fires into our communities; wind blown embers are amongst the deadliest! Embers can travel long distances and either land on, or get sucked into your home’s ventilation, causing it to burn from the inside out. Protecting your home from these embers can literally, save your home and the spread of fire to surrounding homes.

Ember Defense
It’s estimated that 90% of the homes destroyed during wildfires are due to wind blown embers.

Embers shower into attic vents and eave spaces of neighboring houses, igniting them from the inside out! This can happen long before flames even come close!

The Vulcan Vent is a FIRST LINE OF DEFENSE against ember attack, heat and exterior flame. Vulcan Vents will keep dangerous embers from entering the ventilation areas of your home even when the fire is still far away.

How it works
Vulcan Vents are self closing when exposed to extreme heat and flames, preventing fire, as well as ember intrusion. The secret is in our patented design: our unique expanded hexagon core, coated with an intumescent coating from Firefree Coatings Inc.

Superior air flow!
Our 1/4” hex core allows for a high ratio of Net Free Vent Area (NFVA).
The honeycomb core is made of 2 mil aluminum. It’s lightweight, strong and works with many vent styles.

Stops Fires COLD!
Vulcan Vents are different. We use a smaller mesh size and have an ACTIVE measure against flames. Once exposed to heat, the specialized coating will expand rapidly, self closing the vent completely and begin actively protecting your home from the dangers of flames and EMBER INTRUSION.

Protection you can TRUST!
- Building code (CBC), Chapter 7A rated!
- WFCI 14047.b 1 hour fire rated assembly!
- WUI compliant!
- ASTM E2886 / E2886M tested!
- California State Fire Marshal accepted!
